Artist in vision. Scientist in method. Product manager in execution. With eight years in clinical research and three years building AI-powered healthcare products, I thrive in ambiguity by connecting customer needs, data, and diverse perspectives to uncover the right problems and create meaningful solutions. Product is where I combine creativity with analytical rigor to build things that genuinely improve people's lives.

Product Discovery • 0→1 Product Development • Roadmapping • Customer Research • Agile/Kanban • Jira • Claude Code • HubSpot • Datadog • AI/LLM Product Development • Phase I–IV Clinical Trials • FDA/EU MDR

Experiences:

Product Manager | Medelooop | January 2026 - August 2026 (Present):

- Contributed to the ground-up redesign of Medelooop's AI-powered clinical research platform, leading product execution from discovery through launch over a six-month development cycle. The platform reached 1,500+ research queries from 104 external users across 20 organizations within two months of release.
- Led 0→1 discovery through 20+ customer interviews, including engagements with Cedars-Sinai, Ernst & Young (EY), and Premier representing \$1M+ in annual contract value, translating enterprise workflows and requirements into scalable product solutions with Design and Engineering.
- Owned strategy and end-to-end delivery across 6+ platform initiatives, including Workspace, Dataset Versioning, Codeset Management, Notifications, Account & Admin, and Self-Signup Freemium; the freemium launch acquired 30+ users in its first month.
- Built and evolved Product's operating model across Product, Design, and Engineering, introducing 1-week sprint cycles during beta and later transitioning to Kanban as the backlog evolved; introduced earlier customer-context and engineering-feasibility reviews, reducing late-stage design revisions from 3–4 rounds to 1–2 and eliminating up to 3 weeks of rework per initiative.

Associate Product Manager | February 2024 - January 2026

- Built Medelooop's Customer Success function from the ground up, establishing onboarding playbooks, VoC processes, and feedback loops that created a systematic pipeline from customer insight to product decisions.
- Managed 10–15 enterprise healthcare customers and conducted 40+ interviews and usability sessions, translating recurring customer pain points into 12–15 shipped features across three products while serving as acting Product Manager.
- Owned customer onboarding and adoption across 15+ research organizations, reducing time-to-first-query to 1–2 days, achieving 85% beta-to-paid retention, and contributing directly to 14 Closed Won deals totaling \$417K+ in contract value.

Clinical Scientist | Abphina | May 2023 - December 2023:

- Conducted evidence-based research across 2 vascular medical device programs, systematically reviewing and synthesizing findings from 40+ peer-reviewed studies to evaluate the safety, efficacy, and clinical performance of endovascular stent technologies.
- Analyzed clinical trial data across multiple safety and efficacy endpoints, comparing patient outcomes, adverse events, and device performance to identify trends and assess the clinical benefit-risk profile of endovascular stent technologies.
- Synthesized quantitative clinical data and scientific literature into 2–3 regulatory deliverables, including Clinical Evaluation and Clinical Study Reports, translating complex evidence into clear recommendations supporting FDA and EU MDR submissions.

Biotechnology Article Writer | HITLAB | December 2022 - August 2023

Freelance Medical Illustrator | Boyut & New York Medical College | January 2019 - May 2024

Clinical Research Associate | Locomotor Learning Lab | October 2016 - July 2019

Education:

M.S., Biomedical Sciences | New York Medical College
(GPA: 3.92)

B.S., Biology | Stony Brook University (GPA: 3.80)

Certifications:

- **Design and Interpretations of Clinical Trials** (Johns Hopkins University)

- **Clinical Trials Analysis, Monitoring, and Presentation** (Johns Hopkins University)

- **Artificial Intelligence Micro-Certification** (Product School)

- **Medical Technology and Evaluation** (University of Minnesota)
